(54) JOG DIAL SWITCH DEVICE

(57) Abstract:

PURPOSE: To provide an inexpensive jog dial switch device having excellent durability with less chattering.

CONSTITUTION: A jog dial switch 100 is formed of a switch group consisting of a plurality of switches SW1, SW2, SW3, SW4 arranged in ring; and a control part 12 for controlling the switches. Each switch is formed of a working part and a contact part, and by operating the working part, a pulse is outputted. The control part 12 detects which of the switch group is in ON state by a key-in line 14 while a key scanning pulse 13

is outputted to the switch group from the control part 12. Further, the jog dial switch 100 has a change-over mode switch 15 for switching the detection mode of the control part 12.
